

BRCA1 Gene: *Homo sapiens (hg19)*, [chr17:41320245-41322344](#), reverse genomic strand

Your input sequence is 2100 bp long. It contains 344 possible guide sequences.

 Shown below are their PAM sites and the expected cleavage position located -3bp 5' of the PAM site.

 Click on a match for the PAM NGG below to show its 20 bp-long guide sequence. (Need help? Look at the [CRISPOR manual](#))

 Colors **green**, **yellow** and **red** indicate high, medium and low specificity of the PAM's guide sequence in the genome.

Gene Models:

Do not show

Update

 Variant database:

1000 Genomes 05-2013

 Min. frequency:

0.0
